

(FOR IMMEDIATE RELEASE)

RENIKOLA SIGNS MOU WITH PT PERTAMINA GAS

Renewable Energy Synergy for the Future: Strategic Biogas Collaboration at PIPES 2025

Jakarta, 19 June 2025 – reNIKOLA Holdings Sdn Bhd (“reNIKOLA”) announced the signing of a Memorandum of Understanding (“MoU”) with PT Pertamina Gas (“Pertagas”) through its wholly owned subsidiary, PT reNIKOLA Primer Energi (“PT RPE”). The MoU establishes a strategic collaboration for biogas business development across the Sumatra and Kalimantan regions.

The MoU was signed during the Pertagas Integrated Pipeline and Energy Summit (PIPES) in Jakarta, themed “*Accelerating Clean Energy Transition through Infrastructure Integration.*” This collaboration aligns with Pertagas’s strategic goals to develop a reliable and integrated national gas pipeline infrastructure from upstream to downstream, including the advancement of renewable energy as a component of future energy distribution systems. The agreement marks a concrete commitment by both parties to support the acceleration of national energy transition and carbon emission reduction through the utilization of renewable energy derived from organic waste such as palm oil mill effluent (POME).

President Director of Pertagas, Mr. Gamal Imam Santoso, said, “We see biogas as a highly promising alternative energy source to support the national energy mix. With Pertagas’s infrastructure and expertise, along with reNIKOLA’s experience in renewable energy development, we are optimistic that this collaboration will bring real impact, both for the energy sector and communities surrounding our operational areas.”

Director and Chief Executive Officer of PT RPE, Dr. Mohd Amran bin Mohd Yusof, said, “This collaboration marks an important milestone in advancing a green economy based on local potential. We hope that synergy with Pertagas will accelerate the realization of biomethane projects that deliver positive social impacts, particularly in palm oil-producing areas and locations far from existing energy supply sources.”

This partnership opens up significant opportunities for the development of biogas/biomethane production, purification, and distribution infrastructure that can be integrated with Pertagas’s gas pipeline network. On the other hand, challenges such as ensuring a stable supply of raw materials, the scattered location of feedstock sources, and adaptation to green energy regulations remain key concerns.

Nevertheless, with strategic synergy and support from various stakeholders — both governmental and private — this collaboration is expected to overcome those challenges and serve as a replicable model nationwide.

About PIPES 2025

PIPES 2025 is an annual forum organized by Pertagas to bring together energy industry players, regulators, and strategic partners to discuss innovations, strategies, and collaborations aimed at a more sustainable and integrated energy system.

The MoU signing between Pertagas and reNIKOLA further strengthens PIPES's position as a collaborative platform in driving impactful and concrete future clean energy projects.

About PT Pertamina Gas

PT Pertamina Gas is a subsidiary of the Gas Subholding of PT Pertamina (Persero), focused on managing and developing midstream and downstream natural gas infrastructure in Indonesia.

About PT reNIKOLA Primer Energi

PT reNIKOLA Primer Energi is a wholly owned subsidiary of reNIKOLA Holdings Sdn Bhd, a renewable energy company in Indonesia focusing on biomass, biogas, and other sustainable energy solutions with an emphasis on social and environmental impact.
